MEMO TO FILE

Re: Geokinetics Inc.
ACT/017/001
Utah Experimental Site #1
Sec. 2, T. 14 S., R. 22 E.
Uintah County, Utah

Mr. Ken Roane, of Geokinetics Inc., visited myself and Pat Driscoll in the Division offices this afternoon.

Mr. Roane was seeking information required for an environmental assessment, requested by Messrs Bob Kerr, and Larry Harrington of the Laramie ERDA office. Mr. Roane explained that ERDA is interested in a 50% interest in the Geokinetics pilot in-situ project located in the above described location. Mr. Roane felt the approved Mining and Reclamation Plan filed with the Division would be generally sufficient for ERDA, but he also requested information regarding:

- 1) The present plant ecology of the site
- 2) Ground water conditions at the site
- 3) Other mineral resources at the site
- 4) Seismic probability at the site

Pat explained the importance of the nearby gas wells to the pilot project location. I supplied Mr. Roane with references for the seismicity, mineral resources, and ground water information available for Uintah County. In addition, he reviewed the November 14, 1975, memo by Ron concerning the site inspection of November 13th in which the vegetation observed was listed.

Mr. Roane said he would send the Division a copy of the ERDA environmental assessment when completed.

Additional information on planting test plots of appropriate vegetation is still needed, Mr. Roane stated he would be in contact with Ron for said information.

DIVISION OF OIL, GAS, AND MINING

BRIAN W. BUCK
ENGINEERING GEOLOGIST
